We Polish, Repair & Seal all Stone Surfaces

Stone Soap for Benchtops and Floors

Stone Soap is a powerful, concentrated cleaner recommended by The Marble Man. It is used for regular and heavy duty cleaning of indoor natural and engineered stone benchtops and stone tile floors. It can be used daily and will leave surfaces looking fresh, sparkling and streak free.

Key Features

- Contains natural enzymes that remove in-ground dirt and stains caused by food, liquids, oil, grease, mould and other organic substances
- Contains a small amount of penetrating sealer which tops up protection every time
- No rinsing with water as this product acts as a rinsing product

Surfaces

- Polished and unpolished natural stone benchtops and floors made from granite, limestone, marble, slate and travertine
- Engineered stone tiles such as Caesarstone, Essastone, Quantum Quartz, Silestone, Smartstone and HanStone
- Other surfaces – porcelain, ceramic, terracotta tiles; cement pavers; masonry; grout

Tips

- Always test a small, inconspicuous area first to determine suitability and desired results
- Using too much product will leave a residue which may need to be rinsed
- Imperfections and streaks are more noticeable on high gloss surfaces therefore benchtops and floors must be dried with a clean towel to achieve a mirror finish
- Professional cleaning before using **Stone Soap** for the first time is recommended to prepare the stone surface for effective, regular cleaning

DO NOT use any abrasive, acidic, solvent, caustic-based cleaners or scourers as these can weaken the integrity of the sealer.

DO NOT cut directly on the benchtop without using a cutting board.

Application – Before use shake bottle well; Read label before use

Benchtops

- Step 1** Wipe benchtops to remove excess food, oil, dust or liquid
- Step 2** Mix 1 capful / 10ml of **Stone Soap** with 500ml of water in a spray bottle
- Step 3** Spray onto benchtop (approx 1 spray per ½ metre area (too much product will cause streaking))
- Step 4** Wipe the surface dry with a paper towel or soft microfibre cloth. **Do not use scourer or wet sponge**

Floors

- Step 1** Sweep or vacuum floor to remove any loose dirt, dust and debris
- Step 2** Mix 80ml of **Stone Soap** in half a bucket of water (approx 4 litres)
- Step 3** Use a damp, microfibre mop to clean the floor with the solution in the bucket (squeeze out excess liquid first – a damp rather than wet mop will give best results)
